

LARVA LACE SYNTHETICS

Larva Lace carries a wide variety of synthetic materials that mimic lots of natural materials. Synthetics are stronger than most natural materials, cost less and are easier to find.

Here are a few ideas to try.

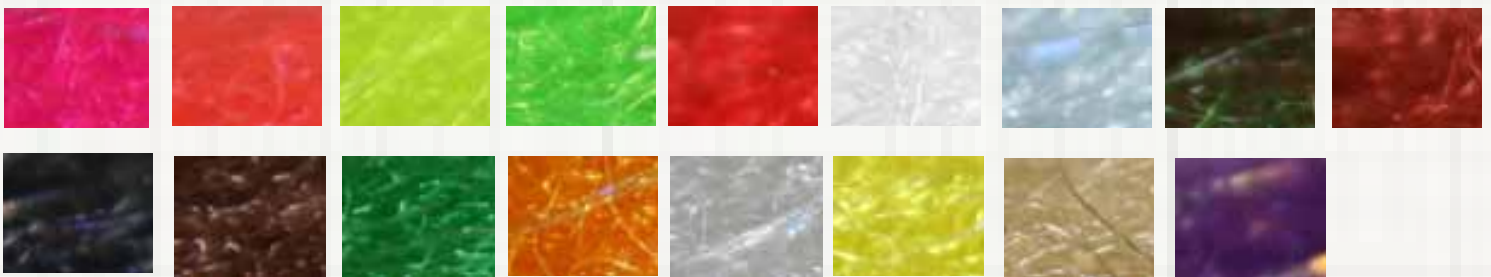

POLY BEAR

If you are looking for calf tail try using Poly Bear. We carry it in 25 different colors. Poly Bear is a polypropylene fiber which doesn't absorb water, so larger flies won't get heavy and difficult to cast.

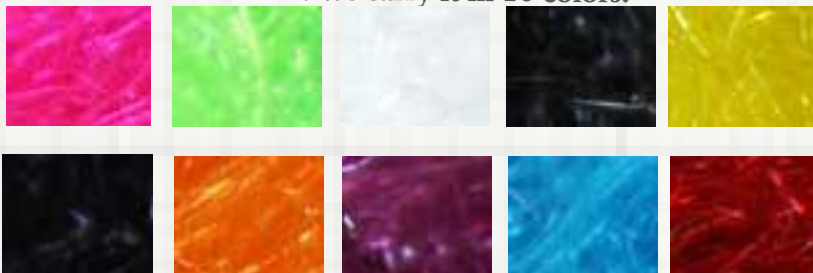

SHIMMER

Can't find that right color of Marabou try Shimmer. We carry it in 17 different colors. It swims and breaths just like Marabou, but is much more resilient. Shimmer can be used in any fly recipe that calls for delicate Marabou.

FIRE LITE

Fire Lite is a great substitute for seal in ssalmon & steelhead patterns. It is a tri-lobal fiber that makes your flies come alive in the water. We carry it in 10 colors.
