

## TUBE FLIES

Larva Lace stocks the full line of Frodin Flies F.I.T.S. Tube System designed by -- Mikael Frödin

### F.I.T.S TUBING

The flexibility in these tubes also means that the tube does not break and can withstand the tube hook going in and out of the tube many times. During tying the thread wraps will almost go a little lashing down in the tube and make the fly even stronger. Another unique feature is when you melt the tubes the color will be retained, pigmentation becomes even stronger. 9 colors, 4 sizes. Sold in 1 meter lengths.

### F.I.T.S. Tubing Device

This tube needle has been especially developed for the FITS tubing system. It has 4 steps that makes sure all 4 sizes of tubing will be held in place safe when you are tying. The device has a foot that fits all kinds of tying vises.

### F.I.T.S TUNGSTEN CONE

This may seem like a traditional cone head, not much different from those already available on the market - but they sure are not! In addition to having the traditional advantages of weight concentrating properties in standard tungsten cones they also balance better in the water for their size. They create a perfect balance with SALAR tube hooks, no matter if you prefer double- or treble hooks. The shape of the cone makes it cut the water nicely. They are also very easy to tie with! 8 colors, 4 sizes, 10 per package

### F.I.T.S TURBO CONE

This cone uses simple physic laws to make your fly swim better than anything you have ever seen before! The cone divides the water and creates turbulence that will make your fly move and look alive. With the Turbos you can use the softest materials without them collapsing in the current. The fly creates its own little turbulent stream where the materials in the fly can move even in the slowest or strongest current. If you believe in a moving lively fly this must be your choice. . 8 colors 3 sizes. Or in soft rubber 3 sizes, 10 per package.

### MAKE EM SWIM DVD

Mikael Frodin shows you how to use the FITS tubing system to its full potential. Learn to tie flies that swim better than you imagined possible.

This tubing system is Mikael Frödin's  
**ORIGINAL SCANDANAVIAN DESIGN.**
